

## What's New in Version 7.0?

Zontec is pleased to announce the upcoming release of Synergy 1000 Version 7.0, scheduled for availability on December 1, 2010. The list of new features and enhancements includes:

- Windows 7 compatibility
- Out-of-control popup warning during data collection that requires entry of an assignable cause or corrective action note to resume data input
- Math calculator last function used by each Data Table is retained for next use
- Data Bank and Data Table creation from one dialog box
- "Send to e-mail" command for reports and charts
- Calculation of control limits for selection of multiple Data Tables
- Template for creating ID lists with "Import ID List" command
- Template for creating coded note lists with "Import Note List" command
- Ability to define an often-referenced document, image, website or other software application as a "hyperlink" for one-click access regardless of the filename or file location
- Improvements to the "Merge Data Table" function, providing enhanced navigation capabilities to source and target Data Tables.
- Enhanced Control Trend Test alarm setting for up to 20 consecutive data points up, down or on one side of the center line.

Synergy 1000 users currently covered under the Zontec Annual Service Agreement Plan will automatically receive the Version 7.0 update and documentation at no additional cost.

Your Service Agreement also includes unlimited Technical Support. Don't minimize the value of the Service Agreement to your organization. It ensures that you are taking advantage of the latest improvements to the software and are always budgeted for updates. The Zontec Service Agreement makes the most of your initial software investment.
